Date/Time Stamp: Sunday, September 04, 2016 - 12:09 AM

## Weather Summary

\*\*\* HIGH RISK for WIND/LOW RH for parts of eastern Utah SUNDAY \*\*\*

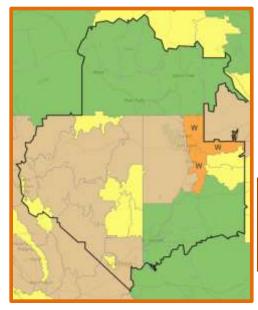

\*\*\*MUCH COOLER TEMPERATURES and SHOWERS to Idaho, western Wyoming and northern Nevada on Sunday\*\*\*

High Risk for Winds/Low RHs continues through Sunday, however the winds will be mainly limited to eastern Utah.

Holdover fires could pop up from yesterday's lightning activity across the eastern Great Basin as southwest winds pick up.

Maximum temperatures are already on a downward trend and will become quite cool on Sunday/Monday as the main low swings into the region. Wetting rains are likely over much of Idaho and western Wyoming and even the northern fringe of Nevada on Sunday. High elevation snow is also possible in these areas above 7500'.

The southern half of the Great Basin will see the cooler temperatures but remain on the drier side, especially by the first part of next week as westerly flow returns.

## Preparedness Levels

#### **Current:**

Great Basin	4
National	3

**Great Basin Fire Activity: Light Initial Attack** 

New Fires and Acres: 12 fires for 3 acres

Large Fire Growth - 2,114 acres

#### Resources:

- Helicopters within the Great Basin
  - 14 Type 1 Helicopters
     13 Type 2 Helicopters
- 29 Type 3 Helicopters

- 71 Crews are assigned within the Great Basin
  - o 19 IHCs
  - o 42 T2IA
  - o 10 T2

\* fires occurred overnight

## **Great Basin Fire Potential Summary**

ERC's starting to retreat a bit due to recent cooler weather, but many remain between the **90th to 97th percentile** across a large portion of northern Nevada, southeast Idaho, western Wyoming and far northern Utah, which is near/above records. With ongoing fires in Idaho, western Wyoming and into northern Utah, there is the potential for significant growth still in the next 24-36 hours in areas that experience increasing winds and humidity below 25%, which will be primarily Utah and Nevada. **High Risk** for wind/Low RH issued for those areas tomorrow.

However, across the mountains of Idaho into western Wyoming, a prolonged period of high humidity and longer duration wetting rains will reset fuels across that region by the end of the weekend into early next week., pushing many PSA's into the "Moist" category.

**Moist** fuel conditions are expected to continue across southern portions of Utah, Nevada and the Arizona Strip this week, with some drying Sunday into the middle of next week.

**A Fuel and Fire Behavior Advisory** remains in effect for the Northern half of Nevada, Southern Idaho, and Northwest Utah.

\*\*\* Please refer to our fuels page for more detailed information \*\*\*
